

HE1344

Compound for Cellular insulation of Communication cables

Description HE1344

It is a fully formulated compound for chemical foamed data cable insulation. HE1344 is a high-density polyethylene compound containing chemical blowing agent.

Applications

HE1344 is intended for:

Foam or foam-skin insulation for telephone singles and data cable with typical expansion of 35-40%.

Specifications

HE1344 meets the following material classification:

ISO 1872-PE, KEGHN, 45-D006 ¹

¹ Refers to Base Resin

The following cable material standards are met by HE1344:

EN 50290-2-23

Cables manufactured with HE1344 using sound extrusion practice normally comply with the following cable product standards:

EN 50288

EN 50407

IEC 60708 IEC 61156

Special features

HE1344 consists of specially selected components to offer:

Consistent cell structure Excellent extrusion stability Good surface finish use in petroleum filled cables when extruded with relative low expansion (<40%) $\,$

Dry core and petroleum jelly filled cables

ASTM D1248 Type III, Class A, Category 4¹

Physical Properties

Property	Typical Value Data should not be used for specifi	Test Method cation work
Density (Base Resin) Density (Compound) Bulk density	943 kg/m³ 945 kg/m³ 500 - 600 kg/m³	ISO 1183 ISO 1183

Tensile Strain at Break (50 mm/min)	600 %
Tensile Strength (50 mm/min)	23 MPa

For information on the influence of petroleum jelly please refer to the article published on borealisgroup.com : "Impact of Petroleum Jelly on the Ageing of Telephone Wire", by going to the following link http://www.borealisgroup.com/pdf/literature/borealis/technicalarticle/1112Impact_of_Petroleum_Jelly_on_the_Ageing_of_Telephone_Wire_Final.pdf

ISO 527 ISO 527

Physical Properties of expanded (45%) insulation

Property	Typical Value Test Method Data should not be used for specification work	
Tensile Strength (50 mm/min),	13 MPa	IEC 60811-501
Tensile Strain (50 mm/min),	500 %	IEC 60811-501
Oxidation Induction Time (200 °C),	50 min	IEC 60811-410
Resistance to Thermal Ageing (105 °C)	1.500 h	IEC 60811-408

Electrical Properties

Property	Typical Value Data should not be used for specifi	Test Method cation work
Dielectric constant (1 MHz) ¹	2,33	IEC 60250
Dissipation Factor (1 MHz) ¹	0,0004	IEC 60250

¹ Measured on moulded plaques containing blowing agent but not expanded

Processing Techniques

HE1344 can be processed over a wide range of conditions.

The adoption of correct processing conditions is important to obtain the optimum physical and electrical properties of the insulated wire. The melt temperature depends on the desired capacitance. The melt temperature should be kept within a close tolerance within +/- 1°C.

Conductor preheating is important for the insulation mechanical properties and to ensure good adhesion to the conductor. Heated water (up to 50°C) in the first cooling trough has been found beneficial to improve conductor adhesion.

Tooling

Pressure tooling is invariably required. The die diameter is a function of the level of expansion with a greater expansion requiring a smaller die. Typically die diameters 3 to 7% below the nominal insulation outer diameter are used.

Extrusion

Conductor preheating	110 - 120 °C
Adapter	195 °C
Barrel 1	155 °C
Barrel 2	170 °C
Barrel 3	185 °C
Barrel 4	195 °C
Die	195 °C
Melt temperature	195 - 200 °C

Please contact your local Borealis representative for specific assistance.

Packaging

Package:

Bags Octabins Bulk

Storage

HE1344 should be stored in dry conditions at temperatures below 50°C and protected from UV-light.

Safety

The product is not classified as dangerous and is intended for industrial use only. Check and follow local codes and regulations!

Please see our "Safety data sheet" / "Product safety information sheet" for details on various aspects of safety, recovery and disposal of the product. For more information, contact your Borealis representative.

Disclaimer
