Additional information

Injection molding
 Celstran can be processed on a standard injection molding unit. A general purpose metering screw is recommended with a zone distribution of 40% feed, 40% transition, and 20% metering. A free flowing check ring assembly is recommended.

Melt Temp: 295-300°C.
 Mold Temp: 85- 95°C.

Processing Texts

Pre-drying	CELSTRAN PA should in principle be predried. Because of the necessary low maximum residual moisture content the use of dry air dryers is recommended. The dew point should be $\leq -30^{\circ}\text{C}$. The time between drying and processing should be as short as possible.
Longer pre-drying times/storage	Note: Material can be over dried and may discolor.
