

CELANEX® 2002-2UV

unfilled; lubricated & UV-stabilized medium flow PBT

Celanex 2002UV is a general purpose, unreinforced polybutylene terephthalate with a good balance of mechanical properties, processability and UV resistance. Celanex 2002UV is a medium flow material

Product information

| | | |
|-------------------|-----|-----------|
| Part Marking Code | PBT | ISO 11469 |
|-------------------|-----|-----------|

Rheological properties

| | | |
|------------------------------------|-------------|-----------------|
| Moulding shrinkage range, parallel | 1.8 - 2.0 % | ISO 294-4, 2577 |
|------------------------------------|-------------|-----------------|

Typical mechanical properties

| | | |
|---------------------------------------|-----------------------|--------------|
| Tensile Modulus | 2600 MPa | ISO 527-1/-2 |
| Yield stress, 50mm/min | 60 MPa | ISO 527-1/-2 |
| Yield strain, 50mm/min | 4 % | ISO 527-1/-2 |
| Stress at 50% strain | 30 MPa | ISO 527-1/-2 |
| Nominal strain at break | >50 % | ISO 527-1/-2 |
| Flexural Modulus | 2500 MPa | ISO 178 |
| Flexural Strength | 80 MPa | ISO 178 |
| Charpy impact strength, 23°C | NB kJ/m ² | ISO 179/1eU |
| Charpy impact strength, -30°C | 190 kJ/m ² | ISO 179/1eU |
| Charpy notched impact strength, 23°C | 6 kJ/m ² | ISO 179/1eA |
| Charpy notched impact strength, -30°C | 6 kJ/m ² | ISO 179/1eA |
| Izod notched impact strength, 23°C | 5 kJ/m ² | ISO 180/1A |

Thermal properties

| | | |
|---------------------------------------------|-----------|----------------|
| Melting temperature, 10°C/min | 225 °C | ISO 11357-1/-3 |
| Glass transition temperature, 10°C/min | 60 °C | ISO 11357-1/-3 |
| Temp. of deflection under load, 1.8 MPa | 55 °C | ISO 75-1/-2 |
| Temp. of deflection under load, 0.45 MPa | 150 °C | ISO 75-1/-2 |
| Vicat softening temperature, 50°C/h, 50N | 190 °C | ISO 306 |
| Coeff. of linear therm. expansion, parallel | 110 E-6/K | ISO 11359-1/-2 |
| Coeff. of linear therm. expansion, normal | 120 E-6/K | ISO 11359-1/-2 |

Flammability

| | | |
|-------------------------------|----------|-------|
| Burning Behav. at thickness h | HB class | UL 94 |
| Thickness tested | 0.80 mm | UL 94 |

Electrical properties

| | | |
|------------------------------|------------|---------------|
| Relative permittivity, 100Hz | 4 | IEC 62631-2-1 |
| Relative permittivity, 1MHz | 3.5 | IEC 62631-2-1 |
| Dissipation factor, 100Hz | 14 E-4 | IEC 62631-2-1 |
| Dissipation factor, 1MHz | 220 E-4 | IEC 62631-2-1 |
| Volume resistivity | 1E13 Ohm.m | IEC 62631-3-1 |

CELANEX® 2002-2UV

| | | |
|----------------------------|-----------|---------------|
| Surface resistivity | 1E15 Ohm | IEC 62631-3-2 |
| Electric strength | 23 kV/mm | IEC 60243-1 |
| Comparative tracking index | PLC 0 PLC | UL 746A |

Other properties

| | | |
|---------|------------------------|----------|
| Density | 1310 kg/m ³ | ISO 1183 |
|---------|------------------------|----------|

Injection

| | |
|---------------------------------|--------------|
| Drying Temperature | 120 - 130 °C |
| Drying Time, Dehumidified Dryer | 4 h |
| Processing Moisture Content | 0.02 % |
| Max. mould temperature | 65 - 93 °C |
| Injection speed | medium-fast |

Additional information

| | |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Injection molding | Rear Temperature 450-470(230-240) deg F (deg C) Center Temperature 460-480(235-250) deg F (deg C) Front Temperature 470-500(240-260) deg F (deg C) Nozzle Temperature 480-500(250-260) deg F (deg C) Melt Temperature 460-500(235-260) deg F (deg C) Mold Temperature 150-200(65-93) deg F (deg C) Back Pressure 0-50 psi Screw Speed Medium Injection Speed Fast |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Injection speed, injection pressure and holding pressure have to be optimized to the individual article geometry. To avoid material degradation during processing low back pressure and minimum screw speed have to be used. Overheating of the material has to be avoided, in particular for flame retardant grades. Up to 25% clean and dry regrind may be used.

Processing Texts

| | |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pre-drying | To avoid hydrolytic degradation during processing, CELANEX resins have to be dried to a moisture level equal to or less than 0.02%. Drying should be done in a dehumidifying hopper dryer capable of dewpoints <-40°F (-40°C) at 250°F (121°C) for 4 hours. |
| Longer pre-drying times/storage | For subsequent storage of the material in the dryer until processed (<= 60 h) it is necessary to lower the temperature to 100° C. |
| Injection molding | Rear Temperature 450-470(230-240) deg F (deg C) Center Temperature 460-480(235-250) deg F (deg C) Front Temperature 470-500(240-260) deg F (deg C) Nozzle Temperature 480-500(250-260) deg F (deg C) Melt Temperature 460-500(235-260) deg F (deg C) |

Printed: 2023-09-14

CELANEX® 2002-2UV

Mold Temperature 150-200(65-93) deg F (deg C)
Back Pressure 0-50 psi
Screw Speed Medium
Injection Speed Fast

Injection speed, injection pressure and holding pressure have to be optimized to the individual article geometry. To avoid material degradation during processing low back pressure and minimum screw speed have to be used. Overheating of the material has to be avoided, in particular for flame retardant grades. Up to 25% clean and dry regrind may be used.

Injection molding Preprocessing

To avoid hydrolytic degradation during processing, CELANEX resins have to be dried to a moisture level equal to or less than 0.02%. Drying should be done in a dehumidifying hopper dryer capable of dewpoints <-30°F (-34°C) at 250°F (121°C) for 4 hours.
