

VANDAR® 4632Z - PBT

Description

Vandar 4632Z is a high impact, 15% glass reinforced polyester alloy. It combines high strength and toughness with a moderate degree of rigidity. It is characterized by excellent solvent resistance, dimensional stability, and moldability.

Physical properties	Value	Unit	Test Standard

VANDAR® 4632Z - PBT

Pre-drying

To avoid hydrolytic degradation during processing, Vandar resins have to be dried to a moisture level equal to or less than 0.02%. Drying should be done in a dehumidifying hopper dryer capable of dewpoints <-40°F (-40°C) at 250°F (121°C) for 4 hours.

Longer pre-drying times/storage

For subsequent storage of the material in the dryer until processed (<= 60 h) it is necessary to lower the temperature to 100° C.

Injection molding

- Rear Temperature 450-480(230-250) deg F (deg C)
- Center Temperature 460-490(235-255) deg F (deg C)
- Front Temperature 470-500(240-260) deg F (deg C)
- Nozzle Temperature 470-510(240-265) deg F (deg C)
- Melt Temperature 470-510(240-265) deg F (deg C)
- Mold Temperature 100-200(40-95 deg F (deg C)
- Back Pressure 0-50 psi
- Screw Speed Moderate
- Injection Speed Fast

Injection speed, injection pressure and holding pressure have to be optimized to the individual article geometry. To avoid material degradation during processing low back pressure and minimum screw speed have to be used. Overheating of the material has to be avoided, in particular for flame retardant grades. Up to 25% clean and dry regrind may be used.
