

Vistalon™ 785A

Ethylene Propylene Copolymer Rubber

Product Description

Vistalon 785A EPM rubber is an amorphous ethylene propylene copolymer of low Mooney viscosity and low ethylene content with a narrow molecular weight distribution. It is used in plastic modification, such as the production of TPOs, and sold in bale form which might be subject to cold flow.

Key Features

- Can be cured with peroxide for high heat resistant goods like seals, gaskets, hoses or belts.
- Excellent low temperature properties.

Physical	Typical Value (English)	Typical Value (SI)	Test Based On
Mooney Viscosity ² (ML 1+4, 257°F (125°C))	30	30	ASTM D1646 (mod)
Ethylene Content	49.0 wt%	49.0 wt%	ASTM D3900A
