Injection Notes

Predrying

In general no predrying, only when moisture on granulate surface predrying at 80°C for 2-3 hours is recommended.

Reprocessing

Up to 100% regrind may be used in which case use of additional stabilisation (e.g. POLYCYCLE®) is recommended as a safety precaution. Usual recycle content 10 - 30%.

Shut down

PP can normally be left in the cylinder. It is quiet insensitive to temperature.

Finishing

The material must be pre-treated for printing and gluing by flaming or corona discharge. Otherwise there are some special printing colours or glues.

Remarks

In contact with copper the melt will be degraded. For permanent processing of glass fibre reinforced grades wear resistant screws and cylinders are recommended.
