

FR2 Series

THERMOLAST® K

The FR2 Series is your material solution for applications requiring high flame retardance at low wall thicknesses. The compounds come with UL94 V0 rating at 1.5mm, are halogen free, and are available in natural and black colors.

### **Typical applications**

- Cable clips
- · Cable holders
- Fastenings
- Grommets
- · Profiles for furniture
- · Seals for in-wall outlets
- Seals for plugs
- Seals for switch boxes
- Seals for windows and doors

### **Material advantages**

- · Adhesion to PP
- For injection molding and extrusion
- Fulfills flame retardant requirements R22/23 HL3 (DIN EN 45545 Railway Applications)
- Halogen free flame retardant system
- Self-extinguishing, no dripping of flaming particles
- UL 94-V0 (1.5mm) listed

Processing Method: Extrusion, Injection Molding

FR2 Series

THERMOLAST® K

 $^{\rm 1}$  Deviating from ISO 37 standard test piece S2 is tested with a traverse speed of 200 mm/min.

All values published in this data sheet are rounded average values.

### FR2 Series

# THERMOLAST® K

| Cylinder temperature    | 170 - 190 - 210 °C, max. 220 °C (340 - 370 - 410 °F, max. 430 °F)  |  |  |  |  |
|-------------------------|--|--|--|--|--|
| Hotrunner               | Hot runner temperatures: 180 - 220 °C (356 - 428 °F). The runner should be empty after a maximum of 2 - 3 shots.   |  |  |  |  |
| Injection pressure      | 200 - 1000 bar (2900 - 14504 psi) (depending on the size and weight of the part).  |  |  |  |  |
| Injection rate          | In general, the fill time should not be more than 1–2 seconds.   |  |  |  |  |
| Hold pressure           | We recommend to derive the optimum hold pressure from determining the solidification point, starting with 40 % - 60 % of the required injection pressure.  |  |  |  |  |
| Back pressure           | 20 - 100 bar; if color batches are used, higher back pressure is necessary.  |  |  |  |  |
| Screw retraction        | If an open nozzle is used processing with screw retraction is advisable.   |  |  |  |  |
| Mold temperature        | 25 - 40 °C (77 - 104 °F)   |  |  |  |  |
| Predrying               | To maintain a high level of mechanical properties the resin must be pre-dried. The use of a desicca dehumidifying dryer is recommended. Drying conditions: 80 °C for 6 hrs; maximum dew point of the inlet air: -25 °C. The maximum residual moisture of the material should not exceed 0,05%. |  |  |  |  |
| Needle valve            | With materials < 50 Shore A the use of a needle valve is advisable.  |  |  |  |  |
| Screw geometry          | Standard 3-zone polyolefine screw.   |  |  |  |  |
| Residence time          | The residence time is to be set as short as possible with a maximum of 10 minutes.   |  |  |  |  |
| Cleaning recommendation | For cleaning and purging of the machine it is appropriate to use polypropylene or polyethylene.  Machine must be PVC-free.   |  |  |  |  |

# FR2 Series THERMOLAST® K

| Processing Guideline Extrusion |  |  |  |  |  |
|--------------------------------|--|--|--|--|--|
| Cylinder temperature           | 160 - 180 - 200 °C; max. 230 °C (320 - 356 - 392 °F; max. 446 °F).   |  |  |  |  |
| Screw geometry                 | Standard three-zone screw (e.g. polyolefin screw). The screw must be able to provide sufficient shearing.  |  |  |  |  |
| L/D ratio                      | At least 25  |  |  |  |  |
| Compression ratio              | At least 2,7 3,5 : 1   |  |  |  |  |
| Screens / breaker plate        | A breaker plate and a screen pack are recommended in the extruder configuration in order to increa pressure. In minimum two screen packs of 100 mesh are recommended.  |  |  |  |  |
| Die land                       | <= 3 mm ( <= 0,12 in.)   |  |  |  |  |
| Extruder Head                  | Ca. 200 °C (390 °F)  |  |  |  |  |
| Die temperature                | Ca. 180 - 190 °C (374 - 410 °F)  |  |  |  |  |
| Predrying                      | Drying of the material for at least 6 hours at 80°C (175°F) is recommended. The moisture level of material has to be below 0.05 %. To avoid porosity in the profile a pre drying is recommended for withickness > 3mm. |  |  |  |  |
| Calibration                    | Generally not necessary; support elements may be required when extruding THERMOLAST® compounds with high hardness or when coextruding with standard thermoplastics.  |  |  |  |  |
| Cleaning recommendation        | For cleaning and purging of the machine it is appropriate to use polypropylene or polyethylene.  Machine must be PVC-free.   |  |  |  |  |
