Product Information

Ultraform[®] H 4320 UNC Q600 Polyoxymethylene

Product Description

Ultraform H 4320 UNC Q600 is an extrusion POM high molecular weight grade. This grade enables high extrusion rates with thick-walled product. It also exhibits high thermal stability and a low tendency to discolor.

Applications

Typical applications include pipe and semi-finished parts for gear wheels, bearings and other mechanical elements.

PHYSICAL	ASTM Test Method	Property Value
Specific Gravity	D-792	1.39
Mold Shrinkage (1/8" bar, in/in)		0.02

Processing Guidelines

Material Handling Max. Water content: 0.15%

Ultraform® H 4320 UNC Q600

Product is supplied in polyethylene bags and drying prior to molding is not required. However, after relatively long storage or when handling material from previously opened containers, preliminary drying is recommended in order to remove any moisture which has been absorbed. If drying is required, a dehumidifying or desiccant dryer operating at 80 - 110 degC (176 - 230 degF) is recommended. Drying time is dependent on moisture level, but 2-4 hours is generally sufficient. Further information concerning safe handling procedures can be obtained from the Material Safety Data Sheet. Alternatively, please contact your BASF representative.

Typical Profile

Melt Temperature 175-200 degC (347-392 degF)

Typical Barrel Profile (degC):

Rear 170 degC (338 degF) Middle 180 degC (356 degF) Front 200 degC (392 degF)

Adaptor 175 degC (347 degF) Die 175 degC (347 degF)

Screw Parameters

Metering Section	40%	
Transition Section	3 to 5 flights	
Feed Section	balance of screw length	
Compression Ratio	3:1	
L/D Ratio	20:1 to 25:1	

Tooling & Sizing Die to Finished Tube dia. 2.0-4.0:1

Selection of pin and die size will be dependent on the material viscosity. In general, the ratio of die size to finished tube diameter is about 2.0-4.0:1. The mandrel (pin) size is determined the same way in relation to the inner tube diameter.
