Technical Data Sheet

DUTRAL[®]

EP(D)M

OCP 5050

Ethylene - Propylene Copolymer

Dutral[®] OCP 5050 is an Ethylene - Propylene polymer produced by suspension polymerisation using a Ziegler-Natta Catalyst at the Ferrara production facility in Italy.
A non-staining antioxidant is added during the production process.

Main Properties

Unit

Typical Value

Mooney Viscosity ML 1+4(100 °C)	MU	60
Volatiles content	% wt	0.7
Ash content	% wt	0.3
Propylene content	% wt	48
SSI	%	52 ⁽¹⁾
KV (100 °C)	cSt	15 ⁽¹⁾

⁽¹⁾ 1% wt in eni SN150

Key Features

Dutral[®] elastomers are characterized by excellent resistance to ageing and weathering, good resistance to both high and low temperatures, low permanent set values, good resistance to a large number of chemicals.

Dutral[®] OCP 5050 is an amorphous, medium molecular weight copolymer, designed as a viscosity index improver for lubricating oils.

It is characterized by very good thickening power at 52 SSI and superior low temperature behaviour.

Main Applications

Oil viscosity modifier.

Physical Form

Bales wrapped with low melting point, oil dissolvable ethylene vinyl acetate copolymer film, typical bale weight: 25 kg.

Packaging

Cardboard box of 625 kg containing 25 bales wrapped with polyethylene film (1070 x 1270 x h1050 mm).

Storage Conditions

Store in dry and vented areas, avoiding temperatures above 35 °C and direct sunlight.

Shelf life : 36 months.
