Notes

These are typical properties only and are not to be construed as specifications. Users should confirm results by their own tests.

¹ Base density is estimated using the assumption that every 1000 ppm of antiblock in the finished product raises the density of the polymer by 0.0006 g/cm³. Base density is the estimated density of the polymer if it did not contain any antiblock.

² Cast film, 250 m/min; Chill roll 25°C.

³ Method B; Cast film, 250 m/min; Chill roll 25°C.

⁴ Cast film, 250 m/min; Chill roll 25°C; Measured on test stand.

⁵ Cast film, 250 m/min; Chill roll 25°C; Measured on test stand; Max pre-strech before sharp probe penetrates.
