TECHNICAL DATA SHEET

TECHNYL ONE J 60X1 V30 WT 9003 LPU

TECHNYL ONE XHT 1607 WHITE 9003 LPU

TECHNYL ONE J 60X1 V30 White 9003 LPU is a high temperature polyamide based on a non-halogenated flame retardant system, reinforced with 30% of glass fiber with best-in-class fire protection behavior, heat stabilized, for injection moulding. A full yellow card is available with a UL94 V0 rating at 0.4 mm, unmatched thermal ageing properties (150°C electrical RTI - Relative Thermal Index), and outstanding electrical properties, including a high comparative tracking index (CTI 0 for 600 volts and higher). This product has superior electrical performance compared to traditional high-performance plastics. Its low corrosion ensures processing tools longevity. This product, based on a high fluidity matrix, offers strong benefits in term of productivity and design freedom.

General

Certifications	RoHS EC 1907/2006 (REACH)	UL listed product EN 45545
Polymer type	PA66/6T copolymer	
Feature	halogen and red phosphorus free flame retardant excellent surface finish IR-laser markable UV-laser markable	corrosion resistant heat resistant laser weldable very high flow
Applications	electrical/electronic applications	wire / cable applications
Colors available	black orange white	natural grey
Forms	pellets	
Processing technology	injection moulding	

Product identification

ISO 1043 abbreviation	PA66/6T-GF30 FR(40)

Physical properties

	Condition	Standard	Unit	Value
Density		ISO 1183	g/cm³	1.49
Water absorption	24 hr, 23°C	ISO 62	%	0.6 - 0.65
Molding shrinkage, parallel		ISO 294-4, 2577	%	0.3
Molding shrinkage, normal		ISO 294-4, 2577	%	0.9 - 1.0

TECHNICAL DATA SHEET

TECHNYL ONE J 60X1 V30 WT 9003 LPU

Processing conditions

Rear temperature	285 - 295 °C
Middle temperature	290 - 300 °C
Front temperature	290 - 300 °C
Recommended mould temperature	90 - 110 °C

Injection notes

The material is supplied in airtight bags, ready for use.,In case that the virgin material has absorbed moisture, it must be dried with a dehumidified air drying equipment, dew point minimum -20°C.,Recommended time 2-4h, recommended water content maximum 0,15% (optimum 0,08%-0,12%)

Injection advice

All reinforced, flame retardant compounds generate some level of abrasion/corrosion to the steel processing equipment. These issues may be magnified by using incorrect processing conditions (temperatures, residence time, moisture level ...) during the moulding process. Therefore, Domo recommends you adhere to the processing conditions detailed in this technical data sheet. For equipment that comes into contact with molten flame retardant compounds, Domo advises you to use a steel with high chromium and high carbon content (having a minimum concentration of 16% chromium) to prevent corrosion and abrasion. For the correct reference of steel associated to flame retardant compounds' processing, please refer to your equipment manufacturers. In the case of high requirements on surface quality a mould temperature of up to 120°C can be considered.
