

PREADD UV 115

0611

PREADD UV 115 is a masterbatch giving very good UV protection to polyolefin plastics. The active ingredient consists of HALS (Hindered Amine Light Stabilizer), which gives the most effective light stabilization effect already at low dosages. PREADD UV 115 has no effect on sealability.

PREADD UV 115 can be used in all polyolefins - mainly in thin applications, such as films and tapes. PREADD UV 115 is especially recommended for applications requiring low volatility and minimal migration.

PREADD UV 115 is approved for use in contact with foodstuffs according to FDA regulations, as long as the dosage level is less than 1.6 %.

Appearance	Granule
Carrier	PE-LLD
Colour	Transparent
Additive	HALS, 15 %
Density	0.94 g/cm ³
Temperature stability	< 250 °C
Dosing	PE 0.5 - 2.0 % PP 1.0 - 3.0 %
Moisture content	Max. 0.25% when produced
Packaging	1000 kg in 20 kg PE valve bags on a one-way stretch wrapped pallet, or 1000 kg in octabins
Storage	Can be stored for one year in its original package. Packages should be stored indoors.

The information in this data sheet represents typical values obtained by us and should not be regarded as a specification.

We condition that the product will be inspected and qualified by the customer for his process to meet the specific requirements set by application, processing equipment and end product.
